PROFILE

Unreal Engine Developer with nearly three years of experience in real-time 3D development, specialising in C++, VR training simulations, reusable framework components, and interactive systems. Experienced in developing XR interactions, integrating application data workflows, and implementing gameplay mechanics using Unreal Engine's Gameplay Ability System, Data Assets, and UMG.

TECHNICAL SKILLS

- **Programming:** Unreal C++ and Blueprint Scripting.
- **Engine & XR:** Unreal Engine 5, OpenXR, Meta Quest, Windows PCVR
- **Engineering:** Reusable framework components, object-oriented design, debugging, modular systems
- **Integration:** HTTP/API integration, session management, application data tracking
- **Gameplay Programming:** Gameplay Ability System (GAS), Data Assets, UMG, Niagara

PROFESSIONAL EXPERIENCE

VirtualX, VR Developer (R&D)

March 2024 – Present · Malaysia

- Develop high-fidelity Unreal Engine 5 VR training simulations that translate industrial Standard Operating Procedures (SOPs) into interactive, realistic training experiences.
- Engineer and maintain reusable C++ XR framework components and VR interaction systems to support scalable simulation development.
- Implement simulation logic, training workflows, and interactive scenarios aligned with operational procedures and training objectives.
- Conduct technical R&D and troubleshoot OpenXR applications across Windows PC VR and Android-based standalone headsets.

Freelance, Gameplay Programmer

Apr 2026 – Sep 2026 · Malaysia

- Implemented character combat for HIGAN, an Unreal Engine 5 action-game prototype, using the Gameplay Ability System — binding player input to Gameplay Abilities so each key press triggers the matching attack behaviour and animation.
- Built a data-driven skill-card system in which Unreal Data Assets define the power, mana cost and associated Gameplay Ability of each card, separating skill configuration from ability implementation.
- Implemented the battle interface in UMG with C++ and Blueprints — skill-card display, mana display and combat status — and integrated it with the combat and skill-selection flow.
- Delivered a playable proof of concept demonstrating the combat mechanics, ability-driven skills and card-based gameplay systems.

PERSONAL PROJECTS

Flex XR Framework — Unreal Engine 5 / C++ / OpenXR
Developing modular, reusable XR interaction components for extensible VR application development.

Uplink — Experimental Unreal Engine 5.8 AI Integration Plugin
Explores connecting AI agents and external tools with Unreal Engine development workflows.

Namestead — Unreal Engine Editor Utility
A batch asset-renaming tool designed to streamline editor workflows.

EDUCATION

- **Multimedia University (MMU), Cyberjaya** — Bachelor of Multimedia (Hons.) Virtual Reality | CGPA 3.54
- **INTI College Subang** — Diploma in Interactive Multimedia with Animation Design | CGPA 2.70
